exe. Copyright (c) 2003. Please read license agreement at Do I need to start the JVM (HotSpot) before I start the MySQL Server? If I want to start the MySQL Server (on my Mac) from a MySQL-JDBC Connector using Eclipse/MySQL, can I start the JVM from the command line first, and then use Eclipse to launch the MySQL Server? Or do I need to launch both the JVM and the MySQL Server from Eclipse? Or do I need to start the JVM with the command line (?) first, and then run Eclipse? A:

You do not need to start the MySQL Server first. Eclipse will do that for you when you start the server from the Eclipse Run menu. The same is true of the JVM. You don't need to start the JVM first, Eclipse will do that for you when you start the JVM from the Eclipse Run menu. 1. Field of the Invention This invention generally relates to spark plugs for internal combustion engines, and, in particular, to spark plugs which are mounted in the engine cylinder wall and are intended to provide improved ignition efficiency. More specifically, this invention relates to the use of special alloy compositions which reduce the formation of carbonaceous residues during engine operations which result in gaseous hydrocarbon emissions. 2. Description of the Prior

Art It is well known that the combustion efficiency of an engine can be significantly improved by providing the engine combustion chamber with an electrode which extends into the combustion chamber at a selected location. This known electrode is commonly referred to as a spark plug. When the known electrode is placed in the combustion chamber, an electrical discharge is created in the combustion chamber which produces a high energy spark to ignite the combustible mixture. When the electrode is located within the engine combustion chamber, the electrical discharge has been known to provide a number of advantages which are known to those skilled in the art. With the known electrode, various forms of erosion may occur which result in a reduction of the effective length of the electrode. These erosion or erosion-like effects are due to a combination of corrosive wear and abrasion. Since the electrode is located within the engine combustion chamber, the corrosive wear is primarily a result of the abrasion of the electrode which occurs due to the impact of the burning mixture on the electrode. These corros
